PROFILE

Highly versatile Tech Lead with over 9 years of experience in full-stack development and system architecture. Proven track record of building complex SaaS solutions, CRM/ERP systems, and AI-integrated applications from the ground up. Expert in PHP/Laravel, React/Nextjs, Vue/Nuxtjs with a focus on scalable architecture and efficient database management.

WORK EXPERIENCE

Flow Digital Sdn Bhd

JAN 2025 - PRESENT

Team Lead

- Orchestrated development lifecycles for high-traffic web applications using Laravel, Vue.js, and Next.js, ensuring 100% project delivery alignment with business goals.
- Steered technical architecture and resource allocation, mentoring junior developers and establishing code quality standards across the stack.
- Architected cloud infrastructure on AWS (EC2, S3, Route 53) and Cloudflare, implementing robust CI/CD pipelines to streamline deployment workflows.
- Spearheaded system security and performance audits, achieving significant improvements in API response times and infrastructure resilience.

Senior Full-Stack Developer

May 2022 - Dec 2024

- Engineered scalable full-stack solutions with a focus on modularity and reusability across Laravel and Next.js environments.
- Provisioned and managed cloud-native environments on AWS, focusing on high availability and cost-effective scaling for growing SaaS products.
- Integrated complex third-party ecosystems including payment gateways, logistics APIs, and specialized e-commerce webhooks (Shopify).

Full-Stack Developer (Freelancer)

2018-2022

- Developed custom-tailored web solutions using PHP/Laravel and JavaScript for various SMEs, focusing on responsive UI/UX and client satisfaction.
- Collaborated with cross-functional design teams to transform complex wireframes into high-performance, accessible digital experiences.
- Optimized legacy codebases for modern standards, improving page load speeds and backend logic efficiency.

KEY PROJECT

SaaS CRM System

Focus on: Multi-tenancy, scalable architecture, and data isolation.

- Designed and deployed a scalable multi-tenant architecture featuring automated environment provisioning and subscription lifecycle management.
- Engineered a centralized Lead-to-Cash pipeline, automating the conversion of prospects into revenue via integrated quotation and invoicing modules.
- Developed a secure PDF generation and distribution engine to automate the delivery of financial records directly to end-customers via email.
- Implemented an integrated Task Management module, providing clients with a unified interface to track project milestones and daily operations alongside customer data.
- Implemented strict data isolation strategies and optimized persistence layers to ensure security and performance across diverse client environments.

Flories E-commerce System

Focus on: Integration (Shopify), resource optimization, and event-driven automation.

- Architected a high-concurrency fulfillment middleware that bridges Shopify storefronts with localized workshop and logistics workflows.
- Engineered a real-time synchronization engine to pull orders and inventory data from Shopify via Webhooks/REST API, ensuring 100% data consistency.
- Designed a dynamic dispatching algorithm to optimize resource allocation between floral production (artisans) and last-mile delivery (drivers).
- Developed an event-driven notification architecture to trigger automated, customer-facing delivery alerts, significantly reducing manual support overhead.
- Built a unified order management interface supporting both synchronized e-commerce data and manual entry for offline/B2B sales.

Courier Management System

Focus on: Cross-border logistics, real-time data synchronization, and shipment visibility.

- Developed a cross-border logistics platform specializing in China-to-Malaysia freight forwarding and parcel consolidation.
- Engineered a robust cross-border data pipeline utilizing secure API protocols to synchronize real-time parcel manifests with overseas WMS providers.
- Designed a user-centric consolidation module allowing clients to manage virtual inventory, select specific parcels for packing, and initiate international shipping.
- Architected a milestone tracking engine that aggregates multi-carrier data into a unified API, providing end-to-end visibility for international shipments.
- Optimized the Pick & Pack workflow by digitizing the communication between the client's front-end selection and the warehouse fulfillment team.

EDUCATION

Diploma in Computer Science
Southern University College

2014 - 2017
